

JASON TERRY

Livonia, MI 48150 | (313) 753-8592 | jason@terryarbors.com | [linkedin.com/in/jason-e-terry](https://www.linkedin.com/in/jason-e-terry) | terryarbors.com

SUMMARY

Penetration tester and security researcher with 20+ years in technology, including enterprise sales at Microsoft, business operations, and dedicated offensive security training. Ranked in the top 1% on HackTheBox Academy and top 1,000 globally in HTB Labs. Background in enterprise technology sales provides a direct line between technical findings and business risk — reports that executives actually read.

TECHNICAL SKILLS

Offensive Security: Network & AD Pentesting, Web/API Security (REST, GraphQL, SOAP), AI/LLM Red Teaming, IoT/Hardware Security, Wireless Auditing (WPA2/3, RF), OSINT, Offensive Tool Development, Binary Exploitation, Physical Security.

Tools: Nmap, Metasploit, Burp Suite, BloodHound, Impacket, Netexec, Nuclei, Sliver, SQLMap, Responder, Wireshark, Ligolo-ng, Chisel, Flipper Zero, Proxmark 4, HackRF, Hak5 Suite.

Programming: Python, Bash, PowerShell, JavaScript/Node.js, C/C++, Go, C#.NET.

Infrastructure: Linux (Arch, Kali), Windows Server, Proxmox, KVM/QEMU, VMWare, Ansible, Terraform.

Frameworks: OWASP Top 10 (Web, API, LLM), MITRE ATT&CK, MITRE ATLAS, NIST 800-53, ISO 27001, PCI-DSS, GDPR.

PROJECTS & RESEARCH

Custom Security Operations Platform | *Node.js, React, TypeScript, PostgreSQL*

- Built a modular security testing framework with 49+ API endpoints, Burp Suite deep integration, and real-time attack orchestration.
- Operator-driven workflow unifying reconnaissance, exploitation, and reporting with a plugin architecture for rapid capability extension.

Offensive Tooling & Engagement Infrastructure | *Python, Bash, PowerShell, C/C++*

- Custom BOF exploit chain: fuzzing, EIP control, bad character analysis, and shellcode injection for x86 targets.
- Automated recon pipelines, NTLM credential attack scripts, and MITRE ATT&CK tactic classifier for structured engagement documentation.
- Curated 480+ tool arsenal organized by attack phase: enumeration, exploitation, privilege escalation, persistence, exfiltration, and C2.

AI Security Research Lab | *Python, Ollama, CUDA*

- Built a 5-tool LLM assessment pipeline on dedicated GPU hardware: prompt injection tester, LLM-as-judge classifier, temperature probe, rate limit finder, and RAG canary token injection.
- Integrated with industry frameworks (Garak, PyRIT, Adversarial Robustness Toolbox); maintains organized prompt libraries for jailbreaks, harmful output, and system prompt extraction.

Hardware Security Lab | *Raspberry Pi, ESP32, HackRF, Proxmark 4, LoRa*

- Custom wireless recon platforms (Pwnagotchi, Bjorn); signal analysis with HackRF/ESP32; RFID/NFC physical access research with Proxmark 4.
- LoRa mesh networking (LilyGo T-Deck, HELTEC LoRa32) for off-grid communication and security testing.

Home Lab & Honeypot Infrastructure

- Full research environment with active honeypots for real-time attack pattern analysis; isolated virtualization (Proxmox, libvirt) for production-grade testing.

CERTIFICATIONS

- PJPT** — Practical Junior Penetration Tester (TCM Security)
- Microsoft:** AZ-900, SC-900, MS-900, PL-900
- In Progress:** PNPT (TCM Security), BSCP (PortSwigger)
- Planned:** OSCP (OffSec)

PRACTICAL TRAINING

- HTB Academy** — Top 1% rank. 500+ targets across CPTS, CWES, and AI Red Teamer paths.
- HTB Labs** — Global rank #902. Top 1,000 in competitive machine exploitation.
- HTB Seasons** — Bronze tier competitor in time-constrained seasonal challenges.
- TryHackMe** — Global rank top 5%.
- TCM Security** — Completed Python for Hackers, AI Hacking, Web/API Hacking & Bug Bounty, Phishing Campaigns coursework.

PROFESSIONAL EXPERIENCE

Knight Watch Inc. Novi, MI — 2025
Account Executive — Physical Security

- Consulted on physical security integrations for Corporate, SLED, and NPO clients — surveillance, access control, and emergency response systems.
- Assessed on-premises security posture and integrated physical threat identification into enterprise risk frameworks.

Apex Digital Solutions Southfield, MI — 2023–2024
Senior Account Executive

- Helped break the company's first \$5M annual revenue milestone in 25 years of business through outcome-focused IT and cybersecurity sales.
- Built an automated RPA pipeline (Power Platform) that eliminated manual data formatting and cut lead generation time by 40%.
- Presented IT and cybersecurity solutions to C-suite stakeholders, aligning technical outcomes with compliance and risk requirements.

Microsoft Detroit, MI — 2022–2023
Direct Sales & Success — Education & NPO

- Advised enterprise Education and NPO clients on M365 and Azure security, specializing in identity management and GRC alignment.
- Designed strategic adoption plans that mapped technical security features to regulatory requirements.

Blockchain Solutions Pinckney, MI — 2017–2022
System Administrator & Founder

- Built and managed a cryptocurrency mining operation (~44 GPUs across 7 rigs), handling networking, power infrastructure, cooling, and remote monitoring.
 - Developed custom tooling for real-time device health monitoring, automated alerts, and remote management across distributed hardware.
- Terry Arbors**
Operations Director & Founder

Pinckney, MI — 2010–2022
- Founded and operated a licensed agricultural operation under strict regulatory compliance, scaling from startup to national industry recognition.
 - Managed full business operations — licensing, regulatory compliance, facility buildout, supply chain, physical security, and strategic marketing.

EDUCATION

AAS in Computer Information Systems — Computer & Network Technology (GPA 3.7, In Progress) — Schoolcraft College, Livonia, MI
